**POLICY<sup>1</sup>:**

Tuberculosis remains a significant public health problem and, despite advances in treatment, can still cause significant morbidity and death. There has been as well a documented trend of increase in the number of cases and the resistance of isolated organism. For these reasons, it is important to identify infected patients and involve them in appropriate treatment programs. Traditionally, the process of screening and identification of infected patients has been performed at all levels of care including private physicians, clinic providers, hospitals, the health department, primary care practitioners (PCPs), and specialty practitioners/providers. The majority of infected patients have been treated and followed by the Kern County Department of Public Health (KCDPH) because of its experience, expertise, and resources.

All KHS plan members will receive an initial screening for Tuberculosis (TB) from their PCP as part of the initial health assessment. Those with active TB will be treated and followed closely for compliance and resolution of the disease through the Direct Observed Therapy (DOT) Service.

TB care and treatment will be provided in accordance with following accepted guidelines<sup>2</sup>:

- KCDPH TB Control Program
- American Thoracic Society and Centers for Disease Control guidelines

**KERN HEALTH SYSTEMS  
POLICIES AND PROCEDURES**

SUBJECT: <b>Tuberculosis Treatment</b>	INDEX NUMBER 3.46-P	Page 2 of 6
--	------------------------	-------------

- American Academy of Pediatrics

TB treatment will be provided in accordance with the statutory, regulatory, and contractual requirements outlined in the following sources:

- DHS Contract Exhibit A – Attachment 10 (7)(E) and Attachment 11 (15)
- MMCD Policy Letter 97-05

**PURPOSE:**

To outline guidelines for the screening and treatment of Tuberculosis and to define the method for assessing and referring KHS members who meet DOT criteria to the KCDPH for DOT.

**PROCEDURE:**

**1.0 ACCESS**

Members ages 0 to 21 years must be assessed for risk factors for developing TB and provided skin testing in accordance with current American Academy of Pediatrics requirements.<sup>3</sup> All children are screened for risk of exposure to tuberculosis (TB) at each health assessment visit. The Mantoux skin test is administered during health assessment visits at age 4-5 years and age 11-16 years. The Mantoux skin test is administered to *all* asymptomatic persons at increased risk of developing TB irrespective of age or periodicity if they have not had a test in the previous year. The Mantoux skin test is not administered if the child has had a previously documented positive Mantoux skin test. For all positive skin tests, there must be documentation of follow-up care (e.g. further medical evaluation, chest x-ray, diagnostic laboratory studies and/or referral).<sup>4</sup>

Members over age 21 (adults) must be assessed for risk factors during the 120 day Initial Health Assessment. Adults are screened for tuberculosis (TB) risk factors upon enrollment. The Mantoux skin test is administered to *all* asymptomatic persons at increased risk of developing TB irrespective of age or periodicity if they have not had a test in the previous year. The Mantoux is not administered if the individual has had a previously documented positive Mantoux skin test. When a positive skin test is noted, there must be documentation of follow-up care (e.g. further medical evaluation, chest x-ray, diagnostic laboratory studies and/or referral to specialist).<sup>5</sup>

Targeted populations as defined by KCDPH are substance abusers, homeless, migrant workers, health care workers, school personnel, correctional facility employees, and inmates.

**2.0 COVERED SERVICES**

KHS covers TB screening, diagnosis, treatment and follow-up care.<sup>6</sup> DOT is offered by local health departments (LHDs) and is not covered under this Contract.<sup>7</sup> KHS continues to provide all medically necessary covered services to the members participating in the DOT program.<sup>8</sup>

If a patient is identified as being infected, the patient should be treated by the PCP as per KCDPH

**KERN HEALTH SYSTEMS  
POLICIES AND PROCEDURES**

--	-------------------------------	-------------

treatment guidelines. The PCP should develop a comprehensive care plan for the member following recommended guidelines by the American Thoracic Society and the Centers for Disease Control and refer the member to the local DOT Program if appropriate. The PCP must assess the risk of noncompliance with drug therapy for each member who requires placement on anti-tuberculosis drug therapy.<sup>9</sup> The PCP must assess for appropriateness of DOT at initiation of treatment and throughout the course of treatment for potential non-compliance.<sup>10</sup> Non-compliance is defined by the KCDPH as “any patient who misses doses of TB medication or an appointment”.

For specialty services required for the member diagnosed with TB, the PCP should initiate the referral process as outlined in *KHS Policy and Procedure #3.22-P: Referral and Authorization Process*.

**2.1 DOT Program**

The following groups of members with active TB should be referred for DOT to the Kern County Health Department TB Control Officer by the assessing PCP (per KCDPH guidelines)<sup>11</sup>:

- A. Patients that have demonstrated multiple drug resistance (defined as resistant to Isoniazid and Rifampin)
- B. Patients whose treatment has failed or who have relapsed after completing a prior regimen
- C. Children and adolescents
- D. Individuals who have demonstrated non-compliance (those who fail to keep office appointments).

The following groups of members with active TB should be assessed for potential noncompliance and for consideration for DOT. If in the opinion of the assessing provider the member is at risk for noncompliance, the member should be referred to the DOT program.<sup>12</sup>

- A. Substance abusers
- B. Persons with mental illness
- C. The elderly
- D. Persons with unmet housing needs
- E. Persons with language and/or cultural barriers

The Health Department would like to have all members diagnosed with TB referred to DOT. Referrals should be directed to the KCDPH TB Control Officer, telephone number (661) 868-0510. KHS Case Managers will assist with the transfer of medical records and coordinate care with the KCDPH TB Control Officer as requested.

The following are the KCDPH DOT criteria:

- A. Class III

**KERN HEALTH SYSTEMS  
POLICIES AND PROCEDURES**

<b>SUBJECT: Tuberculosis Treatment</b>	<b>INDEX NUMBER</b> 3.46-P	Page 4 of 6
--	-------------------------------	-------------

- (i) with a positive sputum smear
  - (ii) with drug resistant TB disease
  - (iii) history of previous TB treatment with relapse or incomplete treatment
  - (iv) history of poor sputum conversion
  - (v) to infirm to manage self care
  - (vi) current history of substance abuse
  - (vii) psychiatric or memory problems
  - (viii) residency in a homeless shelter or other temporary shelter
  - (ix) young children and teens
  - (x) poor compliance during initial unsupervised therapy
- B. Class II
- (i) exposure to drug resistant TB in the same household with a TB Class III on DOT

**2.2 Mandatory Hospitalization**

Members required by the Public Health Officer to be hospitalized for non-compliance or isolation are admitted to Kern Medical Center by the DOT Program. KHS is financially responsible for reimbursement to KMC for those mandated hospital days.

**3.0 DOCUMENTATION**

Services should be documented in the same manner as other services. Other than the reports outlined in the Coordination of Care section of this policy, no special documentation or forms are required.

**4.0 COORDINATION OF CARE, MONITORING, AND REPORTING**

Treatment is provided in accordance with the MOU between KHS and KCDPH<sup>13</sup>. KHS provides joint case management and coordination of care with the KCDPH TB Control Officer.<sup>14</sup>

Providers must report all active cases of TB as outlined in *KHS Policy and Procedure #3.29-P: Condition/Disease Reporting*.

**4.1 Hospital Admissions**

When a member is receiving treatment for active TB, or when a member is suspected of having TB and is admitted for work-up and/or treatment, the admitting physician must notify KHS and KCDPH. Both KHS and KCDPH must be notified by the attending physician when such a patient is discharged or transferred to another hospital. Practitioner/providers must obtain KCDPH approval prior to hospital transfer or discharge of any patient with known or suspected TB<sup>15</sup>

**4.2 Communication and Coordination Between DOT and the PCP**

The PCP must contact the local Health Department DOT on all identified TB cases and share pertinent case management information on the member with DOT Program

**KERN HEALTH SYSTEMS  
POLICIES AND PROCEDURES**

--	------------------------	-------------

personnel. DOT Program Case Managers follow the referred member and provide the linkage between the KCDPH TB Program and the PCP. PCP and Specialty Physicians involved in the treatment of members are required to update KCDPH on a regular basis with regard to the progress of each patient. The DOT Program personnel provide a link between PCPs and the TB program for identified recommendations and consultation at no charge to the PCP regarding the member's care plan or intervention.

Providers involved in the treatment of members with active TB must work with KCDPH in their efforts to identify contacts of an index case. Any KHS members identified as a contact must receive an appropriate evaluation by that member's assigned PCP .

**4.3 Communication and Coordination Between KHS and the Treating Practitioner/Provider**

For patients identified as being infected with TB by a specialist physician or hospital staff, the Provider should notify the member's PCP. The Provider should also notify the KHS UM Case Manager to assist with the coordination of care.

KHS contract providers should notify the KHS UM Department if a patient fails to keep an appointment for treatment or is non-compliant with the treatment regimen.

**5.0 REIMBURSEMENT**

Claims for services covered by KHS should be submitted in accordance with *KHS Policy and Procedure #6.01-P: Claims Submission and Reimbursement*.

**5.1 Medi-Cal Product**

KHS reimburses KCDPH for lab tests performed at the current Medi-Cal fee-for-service rate when claims are submitted in accordance with KHS guidelines. DOT services are carved out of the KHS contract with the DHS. KCDPH must seek reimbursement for these services from DHS or EDS.

**6.0 PROVIDER RESOURCES**

The KCDPH TB Program communicates, educates, and makes appropriate recommendations to KHS PCPs on issues identified by DOT Case Managers.

Providers are encouraged to contact the KCDPH TB Program for additional resources or further education.
